Dear Hiring Manager,

Please accept my application for the Laravel/PHP Developer position at your company. Over the course of five years in software engineering, I have attained some significant experiences coding with a variety of programming languages, databases, frameworks, different development environments and libraries (such as PHP, LARAVEL, ECMAScript (ES6), Vuejs, Typescript, Mysql, MSSQL, CSS, Entity Framework, Material Design, Bootstraps, Tailwind CSS, Vuetify, VS Code, PhpStorm , Git, HTML5, CSS3, Postman etc) , working directly with corporate leadership and clients, and steering projects while leading software development teams. I believe I would be an excellent addition to your organizational team.

I worked at SIGMACH Technologies Nigeria as a remote developer, where I worked with development teams and product managers to ideate Human Resource Software Solutions, design client-side and server-side architecture, build the front-end of the applications through appealing visual design and manage a well-functioning database and effective APIs.

Also, I worked at University College Hospital, Ibadan, Nigeria as part of the developers of (All Purpose Management Information System). APMIS is more than just an electronic health records (EHR) system or a hospital management software (HMS), it is an innovative Health Information System (HIS) that connects all stakeholders together on a single platform to harness the value that is inherent in our connectedness either for health service delivery, education, research or administration. In the same organization, I worked as a fullStack developer in the development of a Computer Based Testing Application. Still in use today, to conduct promotion, recruitment and other exams in the Hospital. Conducts hundreds of tests and generates results immediately in March, 2019.

Working currently as a fullstack developer, I have five years of experience with systems architecture and full-stack web development. Working as a Senior Software Engineer, I have been responsible for developing three new websites serving thousands of users monthly. I have also partook in the building of both monolithic and micro-service systems architecture via Laravel/Vuejs frameworks.

I also have experience in Agile project management, creating and maintaining custom and responsive web and software applications.

Thank you for taking the time to review my application. I look forward to sharing more about my skills and experiences and how they could help me hit the ground running with your organization

Yours sincerely,

Ogunleye Peter O.
